# Chapter 1

## Introduction

The following graphs, summary and tables are compiled from data collected in the 2004-05 school(s) using the **PRIDE Surveys Questionnaire**. These data reflect prevalence and patterns of drug and alcohol use, violence, gang activity and suicide. It is important that this report be utilized as part of drug abuse and violence awareness and prevention programs. We strongly suggest that you:

**COPY THE FOLLOWING PAGES,** (which highlight and graphically summarize drug use and violent behavior by students in schools)

**DISTRIBUTE THEM TO THE FACULTY**

**AND SHARE THIS INFORMATION WITH PARENTS.**

Most of all, we strongly encourage a parent meeting at school to share this information!

**NOTE:** Most drug use occurs at nights and weekends when school is not in session. You will find statistics in this report which support these findings.

**FOR GREATEST SUCCESS IN DECREASING DRUG USE, FACULTY, STUDENTS AND PARENTS MUST WORK TOGETHER TOWARD A DRUG-FREE LIFESTYLE.**

If you have questions about this report or if you wish to have information on other **PRIDE Surveys** services and products, please call the **PRIDE Surveys** Office or write to the following address:

## Chapter 2

# National Summary Statistics

### 2.1 Outline of Procedures Used to Obtain PRIDE National Summary Data

Since 1982, the PRIDE Survey has been used by schools, school systems, communities, and states, to gather data on student drug and alcohol use. In recent years, questions on violence and threatening behaviors have been added. The PRIDE Questionnaire for Grades 6-12 has been utilized by thousands of school systems across the United States, as well as in six other countries. Developmental studies (Adams, 1994; Craig and Emshoff, 1987; Metze, 2000) have indicated that the survey procedures developed by PRIDE result in reliable data on the prevalence and patterns of drug and alcohol use and other behaviors. Further, the evolution of PRIDE Questionnaires since 1980 not only provides research quality data, it provides information that can be easily used by educators, parents and others at the local school and community level to study and monitor the drug and alcohol use, and violent or threatening behaviors.

From the beginning, the PRIDE Survey has assisted local schools and communities with obtaining accurate, defensible information about the drug and alcohol use and related behaviors among their youth. The PRIDE Survey has been utilized by several state education and other government agencies in providing state-wide and regional information on student drug and alcohol use and related behaviors. These state-wide surveys have included near-census studies as well as surveys employing sophisticated sampling designs. Survey results have been used in program and policy decision making at state and regional levels. In addition, each statewide survey also included reports to participating schools for use at the local school level.

Each year the PRIDE data is archived from each student questionnaire. This procedure allows local or state educational agencies to retrieve their data for multi-year comparisons should such a service be needed. This archiving process also provides for summary data to be compiled to create a national database. This national level summary data can be used by local and state clients as comparison data.

The PRIDE national archived data provide a rich source of information for the study of adolescent

prevalence and patterns of drug and alcohol use and related behaviors. In the years prior to the 1989-90 school year, sample sizes of national annual summaries ranged from 14,815 in 1982-83 to 392,003 in 1988-89. The annual summaries for the past ten years involved a weighting system for states that conducted state-wide surveys and states where relatively large numbers of school systems used the PRIDE Questionnaire in local surveys. This weighting system was implemented to prevent any one state from having a disproportionate influence on annual summary results. Random samples were drawn from those states where disproportionately large numbers of students were surveyed. Tables 1-3 contain information regarding national samples for the past ten years.

Table 1 contains the total number of students surveyed in Grades 6-12 for the ten-year period. The large number of total students surveyed in certain years reflects statewide surveys conducted in those years. Table 2 provides percentage information by state for those states that comprised the PRIDE national summaries for each of the ten years. No state contributed more than approximately 10% for any year. Table 3 provides a year by year comparison by sex and race. These demographic comparisons indicate no inordinate differences among years.

As indicated in the previous discussion, the purpose of the PRIDE Questionnaire was to assist state and local education agencies in conducting quality surveys of student prevalence and patterns of drug and alcohol use. Questions concerning violence and other threatening behaviors have been added to the questionnaires in recent years. The national annual summary reports represent large numbers of students who have completed the PRIDE Questionnaire using standardized procedures. While not randomly drawn, the sheer magnitude of the numbers represented in the annual summaries, suggest that these data take on the properties of the population. In addition, the samples appear to have somewhat similar patterns of students sampled across the various states (see Table 2). Discussion of sample sizes may be found in Guilford's *Fundamentals Statistics in Psychology and Education*. While it is desirable to have non-biased sampling, e.g., samples based on random procedures; this is not always possible. Guilford states:

*Where there is less than customary experimental control of the observations, every possible effort should be made to know the conditions under which the data are obtained. Thorough knowledge of the conditions should be a basis for deciding whether selection of cases has been biased. (Page 140)*

Probably the information that speaks most to consistent findings of the PRIDE annual summary analyses across the ten years, was the finding of other drug studies. For example, the PRIDE findings reflect similar findings of the NIDA funded studies conducted at the Institute for Social Research, University of Michigan, from the 1990-91 school year to the present.

## 2.2 National Summary Tables

This section contains tables of national summary statistics for the following:

- sample size for the past ten years,

- sex and race demographics for the past ten years,
- the sample distribution by state for the past ten years,
- comparisons of the frequency of drug use for the current year vs the previous year,
- chi-square analysis of the difference in use for the current year vs the previous year,
- violence summary for the current year and
- frequency of drug use for every year since the 1987-88 school year.

# Standard Graphics

The following graphs will assist you in understanding the relationship of student behavior to alcohol and other drug usage. You are encouraged to make overheads or slides from the graphs for presentations to school faculty, parents, media, and other audiences in the community.

The *Location* and *Time* of drug use graphs will be helpful in understanding the need for a commitment to drug abuse prevention by parents and the larger community - not just by schools. Student alcohol and other drug use occurs most often outside the school and at times when school is not in session.

The *Perceived Harm* of alcohol and other drugs will assist with understanding how the false assumptions concerning harm are related to drug use. When drugs are perceived as harmless, the probability of use increases.

Research indicates that easy access, *Availability*, to drugs increases the probability of use. Availability of alcohol and other drugs normally increases at higher grade levels.

# Advanced Graphics

The following graphs will assist you in understanding the relationship of student behavior to alcohol and other drug usage. You are encouraged to make presentations to school faculty, parents, media, and other audiences in the community.

The graphs on effect of use present data on how intoxicated students become when they use particular drugs. These figures are calculated by looking at the question *What Effect Do You Most Often Get When You ...*. The percentage is calculated as follows; Of those students who reported some use (i.e. all students whose response to the question was other than *Do Not Use*), the percentage of students who responded either *Very High* or *Bombed*. Typically, even though use of most illicit drugs may not seem very high, when they are used by students a high percentage of those students become very intoxicated. This would indicate that there is very little *casual* use of illicit drugs. Students tend to take these drugs in order to become intoxicated.

The graphs on frequency of use by sex present data on gateway and illicit drug use broken down by male and female students.

The graphs on illicit drug use by risk & protective factors show for each category of a risk or protective factor question the percentage of students who report using illicit drugs. For example, on the question of taking part in school activities, if the bar labeled NEVER was 40%, this means that of those students who responded NEVER to the question 40% reported using an illicit drug.

# Summary Statistics

The following graphs and tables summarize some of the *Student Information* questions in regards to drug use. These data are calculated by examining specific subsets of your population. For example, a percentage is calculated for students who report carrying a gun and their liquor use. This percentage is calculated as follows:

$$\frac{\text{Number of those reporting carrying a gun to school and claiming to use liquor}}{\text{Number of those reporting carrying a gun and validly responding to the question *How Often Do You Use Liquor*}}$$

The *Ratio* describes the relationship between the groups examined on each graph. For example, in looking at Guns vs No Guns if the cocaine ratio were 5.3 this would mean the percentage of students who report cocaine use was 5.3 times higher for students who report bringing a gun to school compared to those who don't.

## 5.1 Guns

## 5.7 Risk and Protective Factors

A *risk factor* is any characteristic which researchers have linked to a higher incidence of drug use. A *protective factor* is any characteristic which has been linked to a lower incidence of drug use. The following analysis of local risk and protective factors does not consider any cause and effect, only a *relationship* between student characteristics and drug use. Community, School, Family and Individual risk and protective factors are grouped accordingly and discussed.

These factors include *weak parental attitudes towards use* (parents never or seldom talk to their children about the harmful effects of using drugs); and *family management problems* (parents never or seldom set clear rules and never or seldom enforce those rules).

### 5.7.6 Family - Protective Factors

FACTOR	% PROTECTED
Parents talk about tobacco ( <i>Often/A Lot</i> )	30.5%
Parents talk about alcohol ( <i>Often/A Lot</i> )	31.2%

## Chapter 6

# Drug-Free Communities Support Program

The following tables contain data that is requested by the Office of Juvenile Justice and Drug Prevention on the Drug-Free Communities Support Program form and by other federal agencies. Some of the wording of questions asked by the OJJDP differ somewhat from those asked by the **PRIDE Surveys Questionnaire**. The following is a list of the OJJDP requested statistics and their **PRIDE Surveys** equivalent. The **PRIDE Surveys Questionnaire** can be used to reliably measure and monitor change in all of these areas. The drug categories measured are tobacco, alcohol and marijuana. A *Combined* drug category has been created for all of these areas except for *Age of Onset*.

**30-Day Use** The question *How often do you use* is used to measure this statistic by reporting the percentage of students who report using *Once a Month* or more often.

**Perception of Risk** The question *Do you feel the following drugs are harmful to your health* is used to measure this statistic by reporting the percentage of students who report that using the drug is *Harmful* or *Very Harmful* to their health.

**Perception of Disapproval** The question *Would your parents disapprove of you...* and *Would your friends disapprove of you...* are used to measure this statistic by reporting the percentage of students who report that parents/friends would *Disapprove* or *Strongly Disapprove* of using tobacco, alcohol and marijuana.

**Age of Onset** The question *At what age did you first use...* is used to measure this statistic. The possible responses to this question range from *8 or Under* to *17 or Older*. The table shows the age range that represents the average category score for this question of those students who answered the question with a response other than *Never Used*.

**Availability** The question *How easy is it to get...* is used to measure this statistic by reporting the percentage of students who report that the drug is *Fairly Easy* or *Very Easy* to get.

**Friends Use** The question *Do your friends use...* is used to measure this statistic by reporting the percentage of students who report that their friends *Never* use tobacco or illicit drugs and *Never* or *Seldom* use alcohol.

## Chapter 7

# Percentage Tables

This chapter contains your school survey results in tabular form. Each table corresponds to an item on the questionnaire. The tables contain percentage data by grade level, *Junior High* (grades 6 through 8), *Senior High* (grades 9 through 12), and *Total*. The *N of Valid* column contains the number of students responding to the item and the *N of Missing* column contains the number of students not responding to the item. The remaining columns contain the percentages of students responding to the particular response categories.

The percentage tables of the report appear in the same order as corresponding questions on the questionnaire. The Table of Contents contains the percentage tables by section and gives the page number where each section is located. The List of Tables contains the location of each individual table.

The last section of tables presents the frequency of drug use *How Often Do You Use* data with the categories *collapsed* as follows:

- Daily Use – Every Day
- Weekly Use – Once/Week + 3 Times/Week + Every Day
- Monthly Use – Once/Month + Twice/Month + Once/Week + 3 Times/Week + Every Day
- Annual Use – Once/Year + 6 Times/Year + Once/Month + Twice/Month + Once/Week + 3 Times/Week + Every Day

Three additional drug use categories have been created for the question *How Often Do You Use* by combining the existing data. A *Tobacco Use* category was created by looking at the responses on each questionnaire on the tobacco categories and taking the highest value as the value for *Tobacco Use*. The *Alcohol Use* category was created by looking at the responses on each questionnaire on the alcohol categories. The category of *Illicit Drug Use* was created in the same way by looking at the illicit drug categories. Therefore, the *Tobacco Use* category represents any tobacco use regardless of the type of tobacco, the *Alcohol Use* category represents any alcohol use regardless of the type of alcohol and the *Illicit Drug Use* category represents any illicit drug use regardless of the type of drug.

## Chapter 8

# Year-to-Year Graphics

The following graphs compare prevalence of drug use data across several years.

- The first set of graphs present data on the frequency of use. For the each drug, there is a chart reporting *Annual Use* (i.e. any use within the past year) and *Monthly Use* (i.e. use at least once per month).
- The second set of graphs present data on the availability of drugs. Each graph presents the percent of students who report a particular drug as being *Fairly Easy* or *Very Easy* to get.
- The third set of graphs present data on the effect of use of drugs. Each graph presents the percent of students who report getting *Very High* or *Bombed/Stoned* when using a particular drug.
